

RSA ARCHER® THIRD PARTY GOVERNANCE

INTRODUCTION

Negative stories about third-party relationships are in the headlines almost daily—faulty products from a supplier, cloud service outages and a barrage of third-party provider data breaches, to name a few. Organizations are more frequently using third-party suppliers to deliver or augment their products and services, and those suppliers have third parties providing services to them.

As more and more third-party products and services are used to conduct business, the frequency and impact of risk events and poor performance increases. In addition, the number, complexity and velocity of these risks are increasing, and most organizations do not have adequate staff and available resources. Many times, pockets of vendor profiles, details of engagements and performance data are spread across different teams within the organization, which means the business context and significance of third-party relationships cannot be fully understood.

Without a consistent enterprise-wide framework for managing third-party risk and performance, third-party risks cannot be identified, assessed, evaluated, treated and monitored consistently across all of your business lines. As a result, it becomes difficult to find a single source of truth for third-party risk and performance.

TAKE CHARGE OF THIRD-PARTY RISK AND PERFORMANCE

By standardizing your third-party risk and performance management process across the enterprise, you can establish a common language, measurements, controls and processes to quickly understand, prioritize and manage your risks. With

this accurate view of third-party risks, RSA Archer Third Party Governance provides your executive team with an accurate picture of third-party risk to quickly allocate resources and make better business decisions.

THE RSA ARCHER THIRD PARTY GOVERNANCE ADVANTAGE

RSA Archer Third Party Governance automates and streamlines oversight of vendor relationships. The solution facilitates key activities necessary to fulfill regulatory obligations and best practices across the entire third-party management lifecycle as part of an integrated risk management (IRM) program. You can capture prospective relationships, engage affected stakeholders and assess contract risk, financial wherewithal, and inherent and residual risks across multiple risk categories. This enables you to enforce risk-based selection, establish performance metrics, and monitor and manage the program throughout the third-party lifecycle.

UNDERSTAND YOUR THIRD-PARTY RELATIONSHIPS

Increasing use of third parties across your organization means you need the ability to catalog and assess which third parties your organization is using and how much risk they pose. This is key in helping your business understand their third-party dependencies and associated risk, and it represents the first step in optimizing third-party performance and preventing surprises and losses.

MAKE DECISIONS AND TAKE ACTION

Make certain that decisions about third-party risks are being made consistently and in accordance with the risk appetite and tolerance of the organization, and that appropriate risk treatments are implemented where appropriate. To minimize third-party risk, you need to know that managers across the organization are consistently evaluating risk and applying controls and risk transfer techniques based on the organization's risk tolerance. In the end, as the first line of defense, they should be accountable to take the appropriate action.

MONITOR THIRD-PARTY RELATIONSHIPS

With your organization relying on more and more third-party resources, you need to be able to stay up to date with new or updated vendor relationships and monitor material changes occurring in existing third-party relationships. No third-party relationship is static, and risks will continue to emerge and evolve. Ultimately, you need to ensure that no material risk exists with third-party relationships.

RSA ARCHER THIRD PARTY GOVERNANCE

With RSA Archer Third Party Governance, you can capture prospective relationships, engage affected stakeholders and assess contract risk, financial wherewithal, and inherent and residual risks across multiple risk categories. This enforces risk-based selection and establishes performance metrics. RSA Archer Third Party Governance automates and streamlines oversight of your vendor relationships by facilitating key activities necessary to fulfill regulatory obligations and best practices across the entire third-party management lifecycle.

RSA Archer Third Party Governance includes several use cases to meet your specific business needs as you mature your third-party risk and performance management program.

Third Party Catalog

RSA Archer Third Party Catalog allows you to document all third-party relationships, engagements and associated contracts, as well as the business units and named individuals in the organization that are responsible for each third-party relationship. You can report on all third-party information, including profiles, engagements, third-party business hierarchy, contacts, facilities, accountable third-party contacts and more within a single repository.

Third Party Security Risk Monitoring

RSA Archer Third Party Security Risk Monitoring delivers transparent security measurements, analytics and analyst-level insight to dramatically improve your third-party risk management program. It provides actionable intelligence into

third- and fourth-party IT risk environments. You can discover and analyze the IT footprint of each vendor using artificial intelligence (AI) to automatically measure the value of each asset.

Third Party Engagement

RSA Archer Third Party Engagement allows you to more fully document relevant information about the products and services you receive from third parties to clearly understand the amount of inherent risk exposure. You can associate products and service engagements to the business processes they support to document fourth parties, proof of insurance and master service agreements. This information provides a holistic understanding of dependency on the third party. In addition, you can perform contract reviews, assess contract risk, and perform third-party financial viability assessments and inherent risk assessments across multiple risk categories.

Third Party Risk Management

RSA Archer Third Party Risk Management allows you to assess the governance and controls that third parties have in place around the engagements they are delivering to your organization. These assessments drive residual risk scores of third-party engagements across several risk categories, including financial wherewithal, contract risk, compliance/litigation, fidelity, information security, reputation, resiliency, strategic, sustainability and fourth-party risk. You can use configurable assessment questionnaires to collect relevant supporting documentation for further analysis. The results of these questionnaires are factored into a determination of the third party's overall residual risk profile across all of the engagements they deliver to your organization. Assessment findings can be automatically captured and managed, and exceptions and remediation plans can be established and monitored to resolution.

Third Party Governance

RSA Archer Third Party Governance allows you to monitor each third party's performance. Metrics can be established around each engagement within four categories: Quality, Innovation, Performance and Relationship. Metrics are depicted for each engagement and rolled up to the third party, to understand the third party's performance across all of the engagements they deliver.

CONCLUSION

RSA Archer Third Party Governance provides a central aggregation, visualization and management point for your third-party governance program. By consolidating third- and fourth-party risk data from disparate risk repositories, RSA Archer Third Party Governance enables you to better understand, prioritize and manage the entire third-party lifecycle, and reinforce desired risk management accountabilities and culture while efficiently managing the program.

DIGITAL RISK IS EVERYONE'S BUSINESS HELPING YOU MANAGE IT IS OURS

RSA offers business-driven security solutions that provide organizations with a unified approach to managing digital risk that hinges on integrated visibility, automated insights and coordinated actions. RSA solutions are designed to effectively detect and respond to advanced attacks; manage user access control; and reduce business risk, fraud and cybercrime. RSA protects millions of users around the world and helps more than 90 percent of the Fortune 500 companies thrive and continuously adapt to transformational change.
